

BREAKING zhyman up 15 points in playoff odds since July 20, the largest move on the board · one transaction in the window, a kicker released July 21

BSPN LEAGUE INSIDER · THE VAN PELT COLUMN · MAKE IT (DY)NASTY

THE OFFSEASON ALREADY HAD A WINNER

Thirteen trades and fifty-four waiver claims in forty-seven days. Three of the twelve rows on the odds board moved ten points or more. The two names the July story was built around each went the other way.

By the League Insider Desk · September 5, 2026 · 47 days after "Blood on His Hands"

UNEDITED DRAFT This is a machine-written first pass for Nick to rewrite in his own words. It is not finished copy and it is not for the group chat as it stands. The reporting below is sourced; the writing is scaffolding.

Every figure in this draft was computed from files in this folder (see the appendix). Nothing is from memory. Every claim about a manager is a transaction in the league's Sleeper log or a row on the odds page; there are no quotes, no characterizations, and no guesses about anyone's intent. The odds site is unnamed in the July article and is flagged below.

Good evening. Or good whatever hour it is when you're reading this on your phone in a parking lot. Sleeper says the season starts Wednesday. The league's own numbers say the offseason already had a winner, and it isn't who the July edition would have guessed.

Forty-seven days ago this desk ran a story called "Blood on His Hands." Three of the twelve rows on that odds board have moved ten points or more since. Two of those three are the two names the July story was built around, and each went the other way.

Start at the bottom of the July board and work up. zhyman was the ten seed at 32 percent to make the playoffs. Tonight he is the eight seed at 47. That is plus fifteen, the largest move on the board in either direction, and seven and a half times the page's stated error margin. His transaction log for the window contains one entry. On July 21 he released a kicker. That is the whole log. No trades, no claims, no bids. The kicker was Cairo Santos. We are not saying these two facts are related. We are saying they are in the same paragraph.

The July buyer went the other way. bryansquared was the four seed at 66 percent with the best bye odds in the league at 34. He is now the six seed at 56, bye odds 25, title odds down from 12 to 8. And here is the part the desk found while pulling the ledger. The three players he pried out of zhyman on July 20, Jonathan Taylor, James Cook, and George Kittle, are all gone. Taylor went to mattkendall1 on August 20 for Breece Hall, Christian Watson, and two 2028 thirds. Cook and Kittle went to DD00GZ on August 23, with a 2028 third, for De'Von Achane, Chris Godwin, and a 2029 fifth. The Monday Morning Massacre lasted thirty-four days. FantasyCalc scores the Taylor deal as more

value coming back to him (7,955 to 5,599). It scores the Achane deal the other way (7,796 received, 8,574 sent). KeepTradeCut's page feed, which carries no picks, calls the second one a coin flip: 10,026 to 9,973.

The biggest trade of the window by total value wasn't his. On August 11, CharmCity20 and chrisapplegate moved 24,997 points of FantasyCalc value between them, the most of any deal since July. CharmCity20 got Drake London, Kenneth Walker, Dallas Goedert, and chrisapplegate's 2028 first. chrisapplegate got Trey McBride, DeVonta Smith, and Aaron Rodgers. FantasyCalc gives CharmCity20 the edge, 13,333 to 11,664. KeepTradeCut has it 15,113 to 14,740. Rotowire's season projections on Sleeper lean the other way, 641 points to 630. Three sources, two winners, one conclusion: it was close, and everyone involved will tell you otherwise. Since then chrisapplegate sits at 78 percent, still the one seed, and his bye odds went from 31 to 38. That plus seven is the largest bye gain on the board.

About CharmCity20. Thirteen trades cleared in the window. He was in six of them. On August 8 the league completed four trades in seven hours; he was in one. On August 13 it completed three trades in eighty-three minutes; he was in two of those, one minute apart at 10:06 and 10:07 PM.

The waiver wire, where dynasty leagues go to feel productive. Fifty-four pickups since July 20, every one of them a waiver claim, and the most valuable of them by FantasyCalc was free. Keenan Allen, value 1,031, was dropped by brochillington on July 24 and claimed by bryansquared on July 31 for zero dollars. Third on the list, Najee Harris, was dropped by ljwestwood on July 30 and claimed by DD00GZ on August 20, also for zero. Fourth, Pat Freiermuth, dropped by ljwestwood August 5, claimed by itsders August 7 at zero; ChessNerd420's claim on the same player failed the same morning. The pattern here isn't complicated. The best players on the wire were on rosters in this league two weeks earlier.

The actual money went elsewhere. The two largest winning bids of the window were both 101 dollars: DD00GZ on Darren Waller, and itsders on Xavier Hutchinson, whom FantasyCalc ranks 321st. Same price, 84 ranking spots apart. brochillington spent the most in the window, 149 dollars across nine claims, including 69 each on Haynes King and Charlie Kolar. bryansquared won eleven claims, the most in the league, and had five claims fail, also the most in the league.

The rest of the board, briefly. DD00GZ, four trades and six claims deep, is at 77 percent, up four, and his semifinal odds went from 45 to 49. Lupeeeeeeeee's bye odds went from 23 to 28 on two trades and zero claims. mattkendall1's playoff odds didn't move at all, 66 and 66, while his bye odds went from 25 to 18 and his semifinal odds from 56 to 45, tied with bryansquared for the biggest semifinal drop on the page. ljwestwood went from 44 to 36 and from the nine seed to the ten. And brochillington went from 15 percent to 5 and from eleventh to twelfth, on three trades and nine claims. The desk was told to report the numbers. These are the numbers.

And one more thing. This league's trade deadline, per the settings page on Sleeper, is week 99. The playoffs start in week 15. There is no deadline. Thirteen trades in forty-seven days, and it's the part of the calendar where nothing happens. Sleep well.

APPENDIX

A. Playoff odds, July 20 vs September 5

Source: Nick's screenshot of the league's playoff-simulation page, taken 2026-09-05 11:11 ET, transcribed to `playoff-odds-2026-09-05.csv`. The July 20 baseline is the table in the July article (`playoff-odds-2026-07-20.csv`, README beside it). **Flag:** the July article attributes its odds to "league playoff simulations, error margin $\pm 2.0\%$ " and never names the site, so this draft can't either. The page's stated margin is $\pm 2.0\%$; * marks moves larger than that. `<1%` is recorded as 0.5.

TEAM	RANK JUL 20 -> SEP 5	PLAYOFFS JUL 20 -> SEP 5	DELTA	BYE JUL 20 -> SEP 5	DELTA	TITLE JUL 20 -> SEP 5	DELTA
zhyman	10 -> 8	32% -> 47%	+15 *	8% -> 11%	+3 *	2% -> 4%	+2

Semifinal odds (same sources): mattkendall1 56 -> 45, bryansquared 56 -> 45, zhyman 18 -> 26, DD00GZ 45 -> 49, brochillington 7 -> 2. Full semis and finals table: `derived/odds-delta.md`. Derivation: `python3 odds_delta.py`.

B. Trades since July 20, ranked by total FantasyCalc value moved

Sources: Sleeper transactions (`data/transactions-week1.json`; the whole 2026 log lives in week 1, weeks 0, 2 and 3 returned empty), player names from `data/players.json`, FantasyCalc dynasty values (12-team, 2 QB, PPR) from `data/fantasycalc-dynasty-12team-2qb-ppr.json` joined on Sleeper id, KeepTradeCut superflex values from `data/ktc-superflex.json` (players only; the KTC page's `playersArray` contains no picks), Rotowire season projections via Sleeper (`data/sleeper-projections-2026-regular.json`, `pts_ppr`; note the league adds +0.5 per TE reception, which `pts_ppr` doesn't). Picks are valued at FantasyCalc's un-slotted generic value (e.g. "2028 1st" = 2,131); 2027 and 2029 fifth-rounders have no FantasyCalc entry. Window = `status_updated` after 2026-07-20 12:00 ET.

12	Jack Strand	QB	ATL	22	bryansquared	Aug 23	\$31	419	264	1,545	n/a

Largest winning bids in the window: \$101 itsders on Xavier Hutchinson (FC 158, rank 321, KTC 2,015), \$101 DD00GZ on Darren Waller, \$69 brochillington on Haynes King, \$69 brochillington on Charlie Kolar, \$31 bryansquared on Jack Strand. Claims won / failed / FAAB spent in the window: bryansquared 11 / 5 / \$34, brochillington 9 / 0 / \$149, DD00GZ 6 / 0 / \$101, ChessNerd420 6 / 1 / \$0, chrisapplegate 5 / 0 / \$11, GKrebs 4 / 0 / \$0, itsders 4 / 0 / \$101, ljwestwood 4 / 0 / \$0, mattkendall1 3 / 0 / \$0, CharmCity20 2 / 0 / \$0, Lupeeeeeeeee 0, zhyman 0 (one drop-only move, Cairo Santos, Jul 21). Full pickup and drop tables: `derived/transactions.md`.

Provenance of the three drop-then-claim pairs named in the piece (all from `data/transactions-week1.json`): Keenan Allen dropped by brochillington Jul 24 11:06 AM, claimed by bryansquared Jul 31 11:06 AM. Najee Harris dropped by ljwestwood Jul 30 11:06 AM, claimed by DD00GZ Aug 20 11:07 AM. Pat Freiermuth dropped by ljwestwood Aug 5 11:06 AM, claimed by itsders Aug 7 11:06 AM; ChessNerd420's claim on Freiermuth failed Aug 7 11:06 AM.

D. Other facts used in the piece

- Season start 2026-09-09, current week 1: `data/state.json` (`peek-sleeper state`).
- Trade deadline week 99, 6 playoff teams, playoffs start week 15, FAAB budget 1000, 12 rosters: `data/league.json` (`peek-sleeper league 1312130398133694464`).
- The July 20 zhyman-bryansquared trade (Taylor, Cook, Kittle for Kyren Williams, Corum, Skattebo, Likely, Gadsden) at 11:53 AM ET: `data/transactions-week1.json` . Current holders per `data/rosters.json` : Taylor on mattkendall1, Cook and Kittle on DD00GZ.
- Trade timing clusters: Aug 8 trades at 10:36 AM, 2:47 PM, 4:16 PM, 5:38 PM (four in seven hours; CharmCity20 in the 4:16 PM one). Aug 13 trades at 8:44 PM, 10:06 PM, 10:07 PM (CharmCity20 in the last two).
- Days between articles: July 20 to September 5 is 47 days.
- "seven times the error margin": $15 / 2.0 = 7.5$.

E. Value sources available

SOURCE	STATUS	ROUTE
FantasyCalc dynasty values	available	<code>api.fantasycalc.com/values/current?isDynasty=true&numQbs=2&numTeams=12&ppr=1</code> (same parameters as <code>~/projects/dynasty-dashboard/ingestion/fantasycalc.py</code>)
KeepTradeCut superflex values	available, players only	<code>keeptradecut.com/dynasty-rankings</code> , page-embedded <code>playersArray</code> , <code>superflexValues.value</code> (same route as <code>~/projects/dynasty-dashboard/ingestion/ktc.py</code>)
Season projections	available	<code>api.sleeper.com/projections/nfl/2026?season_type=regular</code> , <code>stats.pts_ppr</code> , <code>company</code> = rotowire (same route as <code>~/projects/dynasty-dashboard/ingestion/projections.py</code>)
Playoff odds	screenshot only	site unnamed in the July article; see A

F. Scripts and reproduction

Tool: `/Users/nick/bin/peek-sleeper` (stdlib Python, read-only, no token; big feeds cached one day under `~/cache/peek-sleeper/` , `--fresh` bypasses).

Pulled 2026-09-05 11:20 EDT (`data/PULLED_AT.txt`). Prior-art recall for the July article: `recall/1f6d7208/` (prompts, tail, inventory, and the Sleeper pull scripts from that session); the article itself is the artifact at <https://claude.ai/code/artifact/2431d052-93d2-49a1-95e3-e9a6afa78df1>.

G. Things to check before this goes anywhere

- The odds site is unnamed. If Nick knows it, name it in A and in the piece.
- The July 20 baseline was transcribed from a screenshot in the July session; that session flagged brochillington's semis/finals cells as hard to read. The piece only uses his playoffs, bye, and semis figures.
- Ages come from Sleeper's player map, projections from Rotowire via Sleeper without the league's TE premium, and pick values are FantasyCalc's generic un-slotted numbers. None of the three value sources is the league's own.
- The Sleeper trending feed (`data/trending-add-24h.json`) is site-wide, not league-specific, and is not used in the piece.
